

Chapter 1. Introduction

1.1 Vision

Green Token is an ambitious project that is part of the Ecomining project.

1.2 The Ecomining Project and our Mission.

Mining of various coins is developing more and more in the world.

A huge amount of electricity is wasted.

Our team is developing a completely new mining concept - Green Eco Mining.

Using the Power of Nature given to us, we can extract (mine) literally everything: water, green spaces, oxygen - everything that Mother Nature gives us.

At the same time, we do not destroy, but restore Nature - and this is our Power!

By purchasing our coin, you are participating in the most noble Mission for planet - the transformation of our world together with you, our Home, our Planet.

All funds will be directed to environmental programs (green spaces, fresh water "out of the air", electric cars, etc.).

1.3 Green Token is made on two progressive blockchains with a final emission of 8,000,000,000 (eight billion) coins - according to the number of inhabitants of planet Earth in each:

- TRON blockchain (TRC 10 standard)**
- Ethereum blockchain (ERC 20 standard)**

1.4 Terminology

Address / Wallet

An address or wallet consisting of credentials on the TRON or Ethereum network, a key pair is generated that consists of a private and a public key, the latter being derived from the former through an algorithm. The public key is usually used to encrypt the session key, signature verification and encryption of data that can be decrypted using the corresponding private key.

ABI

An Application Binary Interface (ABI) is an interface between two software binaries; usually one of these modules is a library or operating system tool and the other is user-run program.

API

The Application Programming Interface (API) is mainly used for developing custom clients. With API support, token issuance platforms can also be designed by the developers themselves.

Digital asset

In TRON documents, a digital asset is the same as a token, which is also referred to as a TRC-10 token.

In the Ethereum docs, a digital asset is the same as a token, which is also referred to as an ERC-20 token.

DApp

A decentralized application is an application that operates without a centrally trusted party. An application that provides direct interaction / agreement / communication between end users and / or resources without an intermediary.

Chapter 2. Application

Green Token is primarily a digital asset and can be used as an asset for trading on an exchange, as well as an internal (corporate) tool for calculations, measuring the abstract value of objects or shares, as well as an internal loyalty point.

In addition, Green Token can be used as an additional component in the development of smart contracts and / or DApp - both in the TRON blockchain and Ethereum.

Chapter 3. Development

2021 - 2022

3.1 Issue of tokens on the TRON and Ethereum blockchain

3.2 Withdrawal of tokens to decentralized exchanges POLONI DEX, RUDEX, EHERDELTA, etc.

3.3 Withdrawal of tokens to exchanges BTC Alpha, P2PB2B, etc., as well as listing on Internet platforms for exchanging electronic units (exchangers).

3.4 Creation of an independent network of Green Token sales departments.

3.5 Popularization of tokens among potential holders and users, as well as the corporate sector.

3.6 In order to popularize, the development and implementation of Bounty programs with the allocation of 1,000,000,000 (one billion) tokens of both TRC10 and ERC20 for these purposes.

3.7 Creation of your own software: web site, applications for mobile devices, etc.

3.8 Increasing the community (through popularization programs).

3.9 Creation of independent and scalable ICO projects with the participation of Green Token.
